WORK EXPERIENCE

Zulfah Technology

Lagos, Nigeria

Intern Frontend Developer

Mar 2022 - Nov 2022

- Contributed to the development of **Z-Coop**, a SaaS platform designed for managing cooperative contributions of organizations and associations.
- Led the frontend team in designing and building a responsive, user-friendly UI using **React** for both web and mobile platforms.
- Implemented advanced state management with **Redux** and **Redux Toolkit**, including asynchronous logic handling.
- Ensured seamless cross-device functionality and optimized the app's performance on various screen sizes.

Smart Approaches

UK

Frontend Developer

Dec 2023 - Present

Service Marketplace Application: Developed a comprehensive web application connecting **Consumers** needing services with **Vendors** offering those services. Key features included:

- **In-App Chat:** Built a responsive chat system enabling real-time messaging between consumers and vendors, enhancing user engagement and communication.
- **Admin Dashboard API Development:** Architected and implemented APIs for the Admin Dashboard, empowering administrators with tools for managing platform activities, such as dispute resolution, account banning, advertisement management, and overall platform oversight.

E-Learning Platform: Built a virtual learning application similar to Udemy, offering online courses for students and robust tools for educators and administrators.

- **Teacher Portal API:** Developed APIs for managing courses and content within the Teacher Portal, allowing educators to create and manage their content efficiently.
- **Admin Dashboard Enhancements:** Contributed to the admin interface, providing administrators with tools to manage courses, oversee student enrollment, and handle reporting and platform analytics.

User Management Application for Service-Based Trac

Dec 2024 - Present

- Developed a user management application to monitor and track daily activities of young individuals utilizing the service.
- Designed and implemented features for capturing and managing user details, including incident reports, ensuring accurate record-keeping.
- Created a timesheet module for service workers, enabling them to select available shifts and track their work progress effectively.
- Enhanced operational efficiency by integrating activity tracking and scheduling capabilities into a single, streamlined interface.
- Focused on user-friendly design and scalable architecture to support multiple users and diverse workflows.

Dormot app

- Contributed to the development of key features in the Dormot app, including a custom keyboard and carousel component. Dormot is a marketplace application that enables users to order goods and commodities with delivery services.

Mobile application for staff clock-in

Mar 2025 - Finish Date

- streamlining workforce management and improving attendance accuracy. Integrated real-time notifications, geolocation for clock-in validation, and admin dashboard for managing shifts and performance tracking.
